# DEPLOY FIRST CLASS COMMUNICATION SERVICES USING SKYPE FOR BUSINESS AS CLOUD PBX

The Skype Cloud PBX call management system enables you to use Skype for Business and either your company's existing phone lines or the Skype for Business PSTN Calling service for inbound and outbound calls. Skype Cloud PBX allows you to replace your existing PBX system with a set of features that are directly delivered from Office 365 and tightly integrated into Microsoft's cloud productivity experience. You can choose a completely in-the-cloud experience, or a hybrid deployment that takes advantage of Skype Cloud PBX while integrating with your existing productivity tools.

## IP COMMUNICATIONS

- IP telephony
- Gateway
- SIP
- DECT
- Unified Messaging
- Voice Mail
- IVR
- GSM
- FAX Server

## UNIFIED COMMUNICATIONS

- Instant Messaging
- Presence
- Video
- Advanced Mobility
- Instant Collaboration
- Call Management

- Conferencing
- Blindness solutions

## UNIFIED COLLABORATION

- Integration & Enablement of business processes
- Custom Apps
- Billing
- Contact Center solutions
- Trading solutions
- CRM integrations
- Integration of multi vendor solutions

 Skype  
for Business

Services designed for **Office 365**

# VOICE

We aim to simplify and accelerate voice enablement of Skype for Business environments with comprehensive voice solutions and services. We enable a full communications platform, including meetings and voice directly from the Office 365 cloud productivity suite, opening new ways for businesses to enjoy the power of unified communications from the cloud.

- Full Skype for Business UC and Voice PBX capabilities.
- We allow gradual migration of users to Cloud PBX
- We combine Cloud PBX with local PSTN services
- We include comfortable managed services as support, backup and restore
- Remote management tools
- Simplified day-to-day management
- Full survivability and local connectivity for remote branches

While the Microsoft Cloud offering is still evolving into a full PBX replacement, we provide solutions that can bridge the gap between today's UC environments and tomorrow's UC as a service.

We provide modular, adaptable solutions for the data center, customer premises or the branch.

We deploy green field installations and Cloud migrations, integrating the existing environment and allowing companies to enjoy the flexibility and dynamicity of Cloud services with no stress ever.
